

The diagram shows two circuit stages. The first stage is an LED driver consisting of a PNP transistor (Q3, L-53P3C) with its emitter connected to +12V and its base connected to a 2k resistor (R5). The collector of Q3 is connected to the anode of an LED (U3, OED-EL-1L2), which is connected to ground. A second PNP transistor (Q4, L-53P3C) has its emitter connected to +12V and its base connected to the collector of Q3. The collector of Q4 is connected to a 2k resistor (R6), which is then connected to the SensorOutput pin. A green 'X' marks the base of Q3.
